ABOUT US

ABOUT US 🤖

There's no need to overthink Christmas gifts this year. Here are a few ideas to get you started from Gifts By Naudy. A personalized gift. Whether you're shopping for a friend or family member, why not get them a gift that's just for them? This can be as simple as picking out a gift certificate for a favorite restaurant or shop, or as complex as getting them a custom-made piece of jewelry or a special painting.

BACKEND DATABASE

The screenshot shows a VS Code editor window with a Django project. The Explorer sidebar on the left displays the project structure, including folders like 'core', 'migrations', and 'templates', and files like 'models.py', 'views.py', and 'urls.py'. The 'models.py' file is selected and open in the editor. The code defines two Django models: 'UserProfile' and 'Item'. 'UserProfile' has fields for 'user' (OneToOneField), 'stripe_customer_id' (CharField), and 'one_click_purchasing' (BooleanField). 'Item' has fields for 'title' (CharField), 'price' (FloatField), 'discount_price' (FloatField), 'category' (CharField), 'label' (CharField), 'slug' (SlugField), 'description' (TextField), and 'image' (ImageField). The 'Terminal' panel at the bottom shows the output of a system check, indicating no issues and the starting of the Django development server at http://127.0.0.1:8000/.
